Mobility

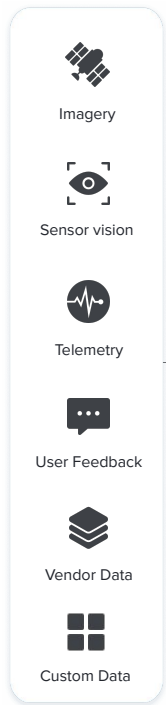

The Mapbox platform powers maps and navigation services for automakers, mobile and web developers, logistics companies, and beyond.

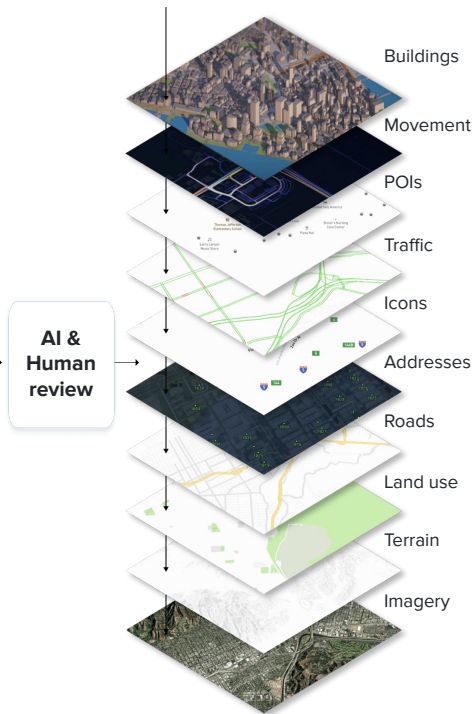

Mapbox is a living location technology platform

Modular building blocks are interconnected by continuously updating global location data.

Continuous inputs

Global data layers

APIs

Maps

- Vector Tiles API
- Raster Tiles API
- Static Images API
- Static Tiles API
- Tilequery API
- Uploads API
- Datasets API
- Styles API
- Fonts API

Navigation

- Matrix API
- Directions API
- Isochrone API
- Map Matching API
- Optimization API
- EV Charge Finder API

Search

- Geocoding API
- Search Box API

Libraries & SDKs

Maps

- Mapbox GL JS (web)
- Mobile maps SDKs (iOS/Android/Flutter)
- Maps SDK for Unity

Navigation

- Navigation SDKs (iOS/Android)
- 3D Live Navigation
- ADAS SDK

Search

- Mapbox Search JS
- Search Mobile SDKs (iOS/Android)
- Mapbox GL Geocoder
- Address Autofill

Services & Applications

Maps

- Mapbox Standard style
- Mapbox Studio
- Mapbox Tiling Service
- Mapbox Atlas

Navigation

- Dash
- Mapbox for EV
- Autopilot Map

Data

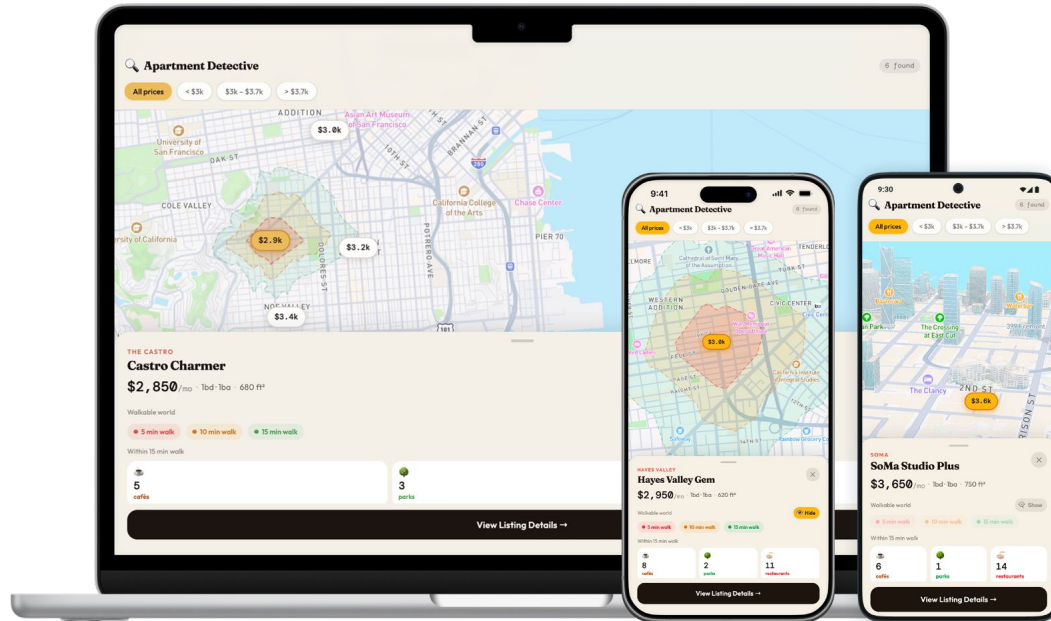

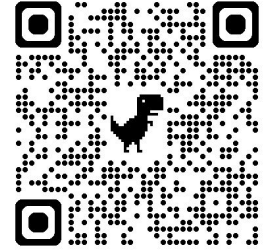

- Data Workbench
- Mapbox Boundaries
- Mapbox Movement
- Mapbox Traffic Data

Location AI

- Mapbox MCP Server
- Mapbox DevKit MCP Server
- Location Agent skills
- Feedback Agent

Mapbox Maps SDK for Flutter

A library for embedding highly customized maps within web, iOS and Android applications using a single codebase.

Mapbox Maps SDK For Flutter v3

This version adds first-class web support powered by Mapbox GL JS.

Requirements

- iOS 14 or higher
- Android SDK 21 or higher
- Flutter SDK 3.38.1
- Dart SDK 3.10.0

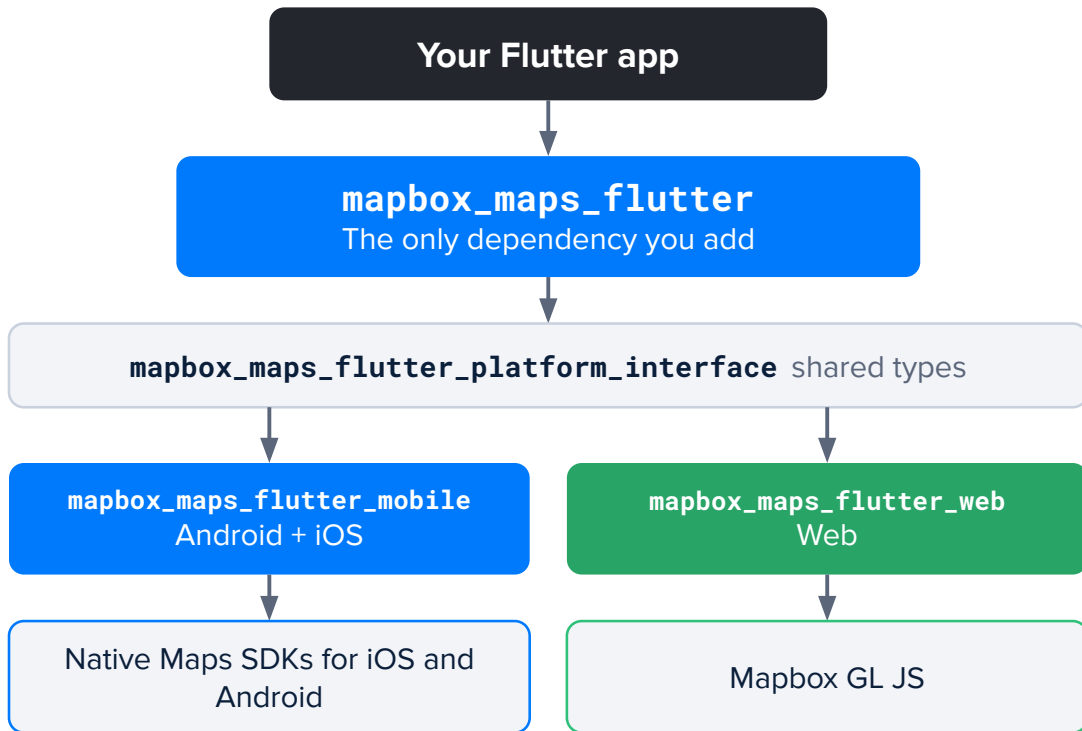

Dependencies

- Mapbox GL JS (Web)
- Mapbox Maps SDK for iOS
- Mapbox Maps SDK for Android

Highlight

- Same package & import
- 3 platforms, 1 API
- Browser-native input

One package, federated under the hood

Add one dependency

Mobile and web implementations are endorsed automatically.

Same Dart everywhere

Shared types live in the platform interface package.

Web needs no setup

GL JS loads on first map use.
Allow `api.mapbox.com` in your CSP.

What's new in v3

1 Web support

One MapWidget on Android, iOS and web, backed by Mapbox GL JS

2 ViewportController

Fly the camera with `moveTo()`; MapWidget is now stateless

3 Gesture streams

Pan, zoom, rotate and pitch events as Dart streams

4 Direct style APIs

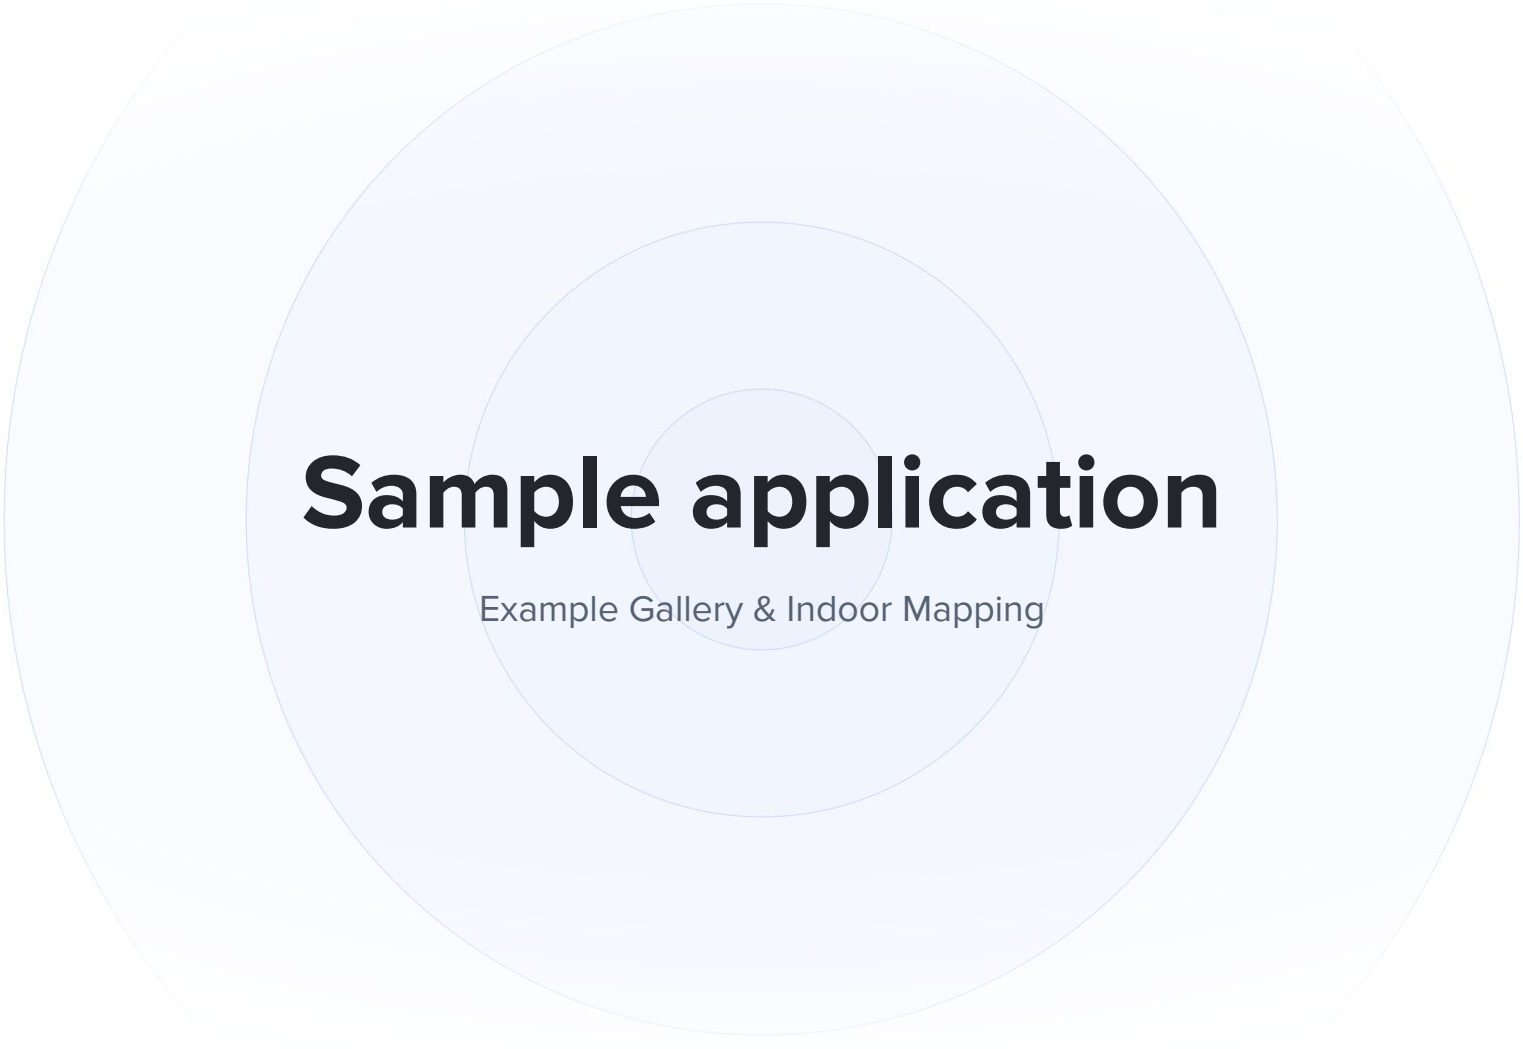

`mapboxMap.addLayer(...)` with no `.style` hop

5 StyleImage

Add icons from PNG bytes, raw pixels or a `ui.Image`

6 Indoor API

Floor state as a stream, plus `selectFloor()` (experimental)

Sample application

Example Gallery & Indoor Mapping

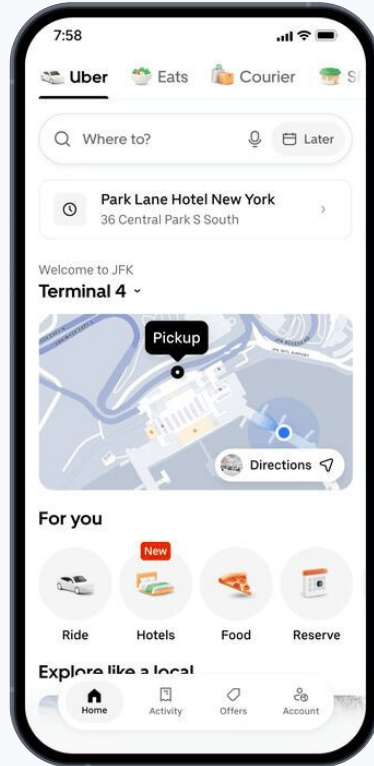

Mapbox brings maps indoors

200+ airports

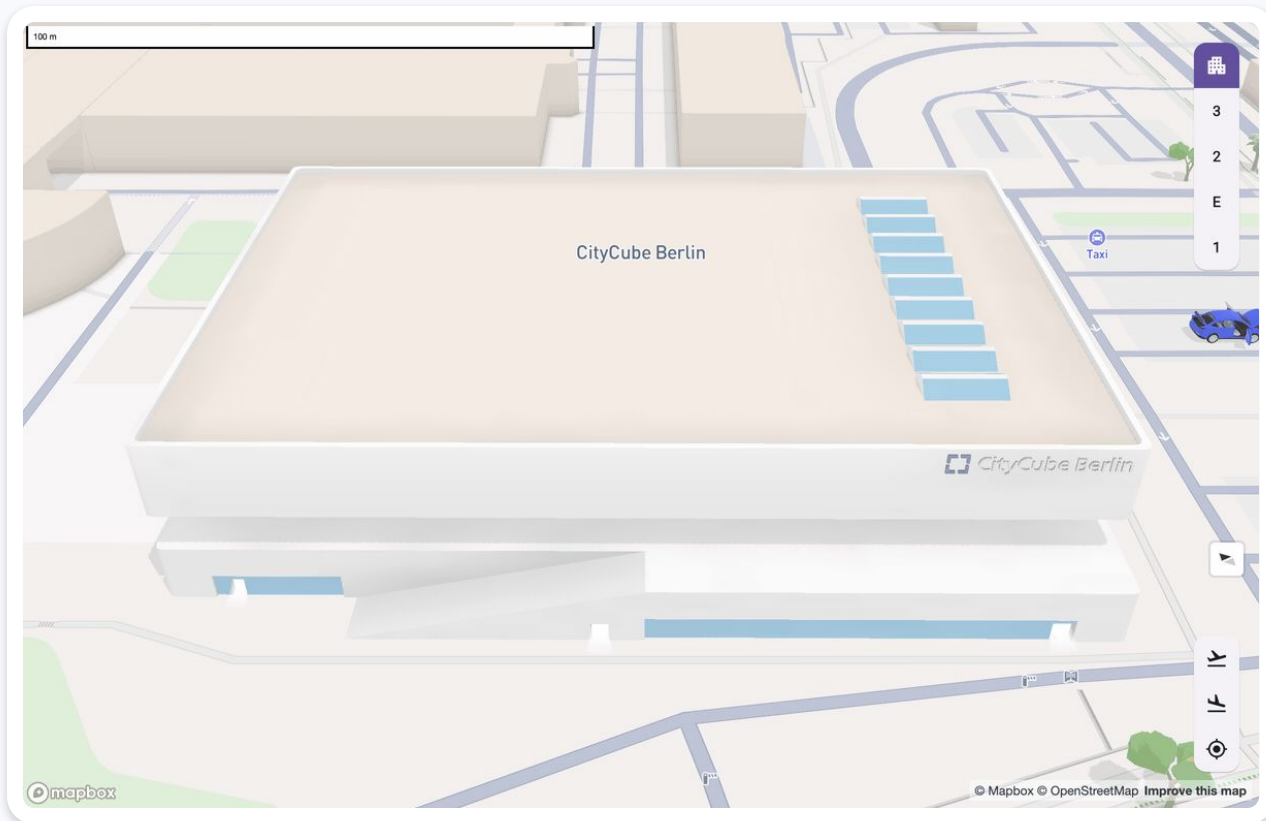

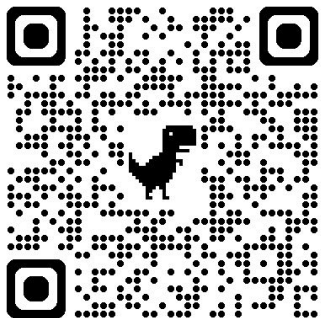

Uber

Uber reduces failed pickups
with airport maps

What if you want
to bring your own
custom indoor map?

From zero to a map in three steps

1 pubspec.yaml

```
dependencies:  
  mapbox_maps_flutter: ^3.0.0
```

2 main.dart

```
void main() {  
  WidgetsFlutterBinding.ensureInitialized();  
  MapboxOptions.setAccessToken(  
    const String.fromEnvironment('ACCESS_TOKEN'));  
  runApp(const MyApp());  
}
```

3 Your widget

```
return const MapWidget();
```

Run it

```
flutter run --dart-define=ACCESS_TOKEN=<token>
```

Requirements

- Flutter 3.38.1 or higher
- Dart 3.10.0 or higher
- Android minSdk 21
- iOS 14 or higher
- Web: GL JS loaded for you

mapbox_maps_flutter 3.0.0,
published Oct 2, 2026 on pub.dev

Indoor maps in Dart

```
// 1. Turn indoor on (Standard style)
await mapboxMap.setStyleImportConfigProperty(
  'basemap', 'showIndoor', true);

// 2. Listen for floor state
mapboxMap.indoor.indoorUpdates.listen((state) {
  print(state.selectedFloorId);
  print(state.floors);
});

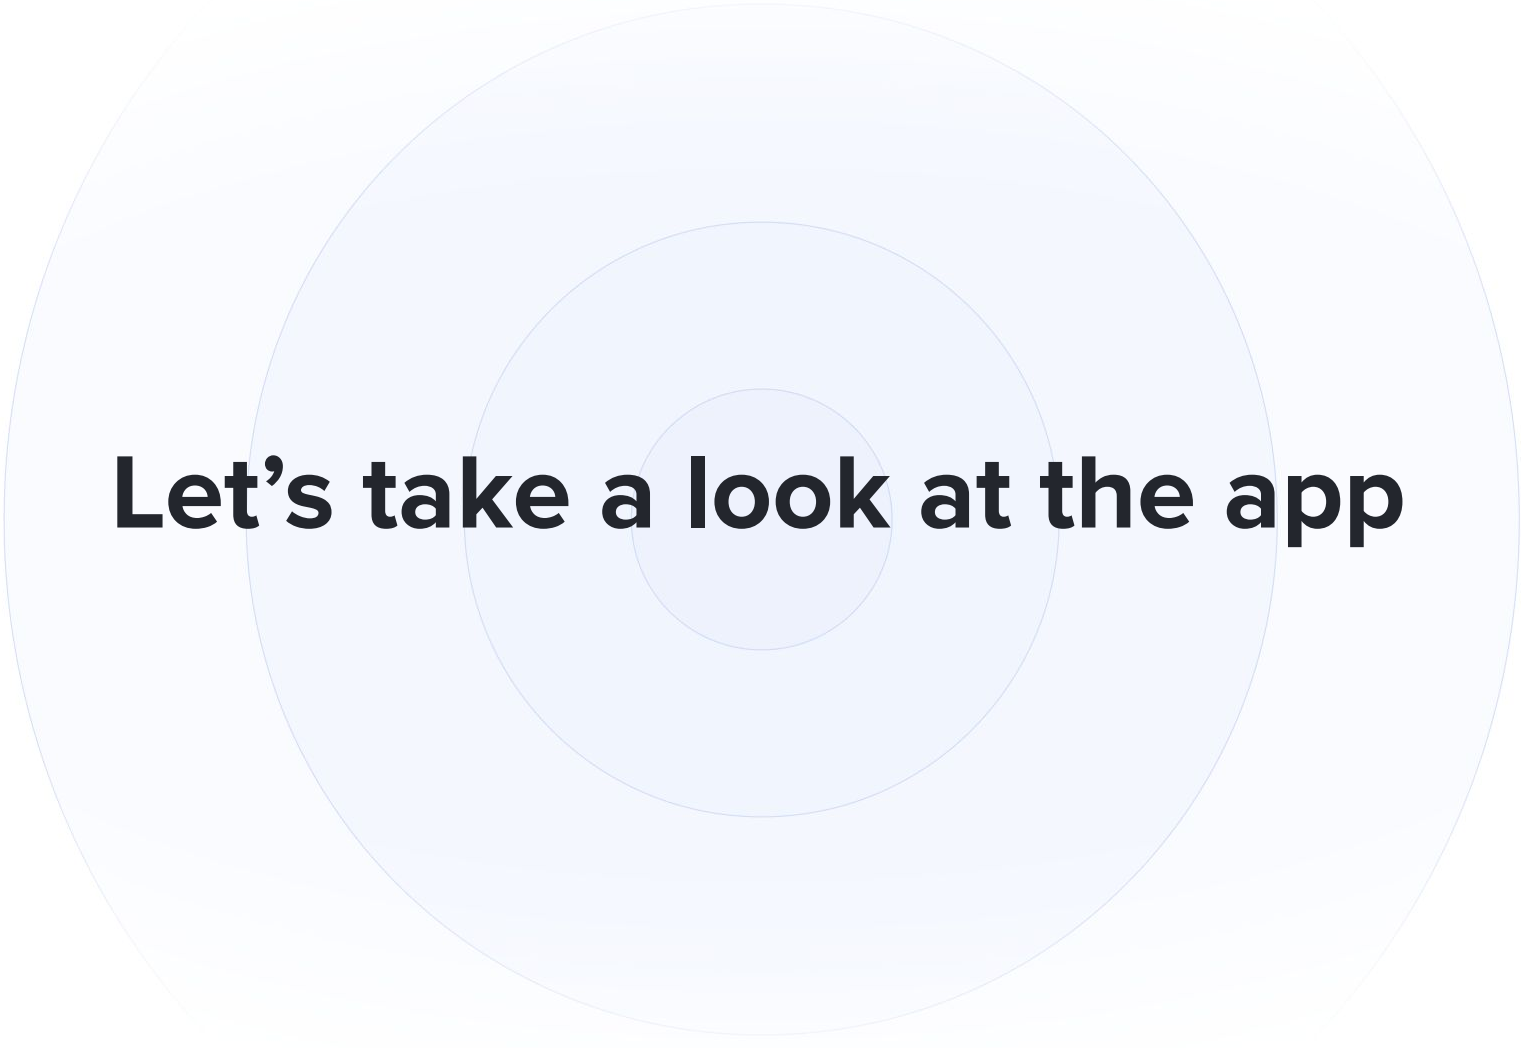

// 3. Switch floors
await mapboxMap.indoor.selectFloor(floorId);
```

Level 3

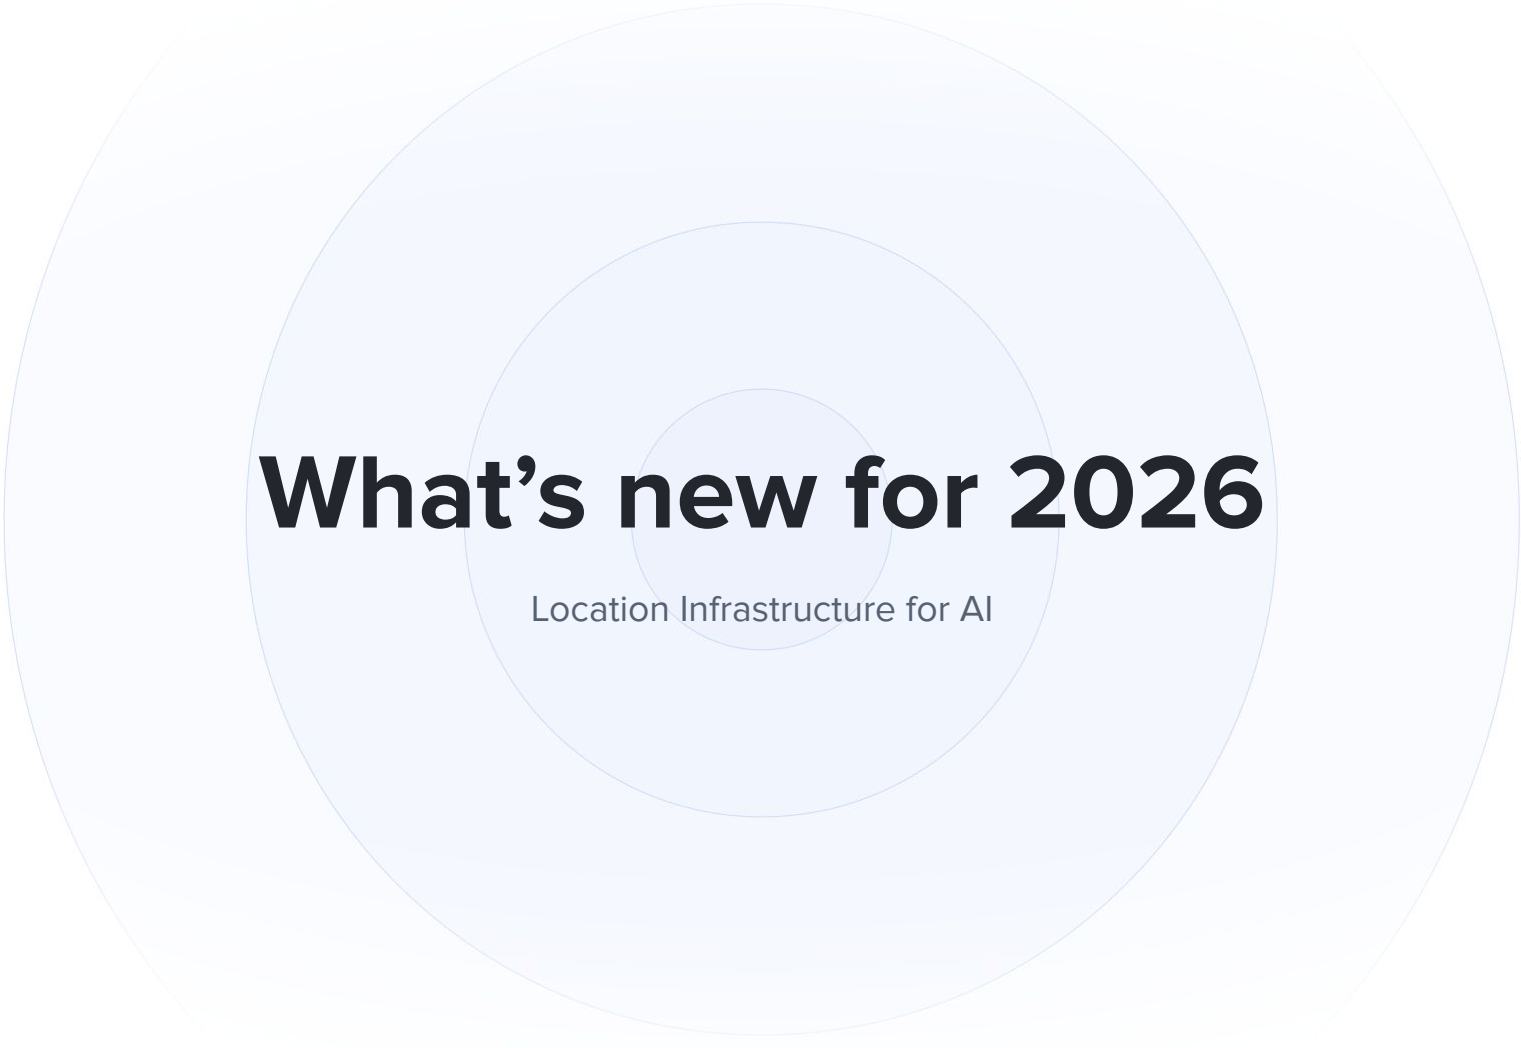

Level 2 (selected)

Level 1

- Off by default: enable showIndoor on the basemap import
- Floor plans only appear for buildings with indoor data
- Experimental. Android, iOS and web

Let's take a look at the app

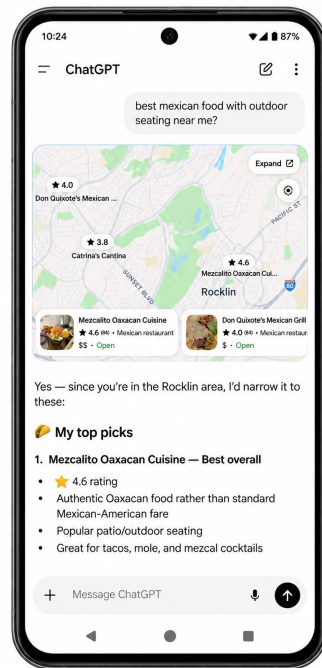

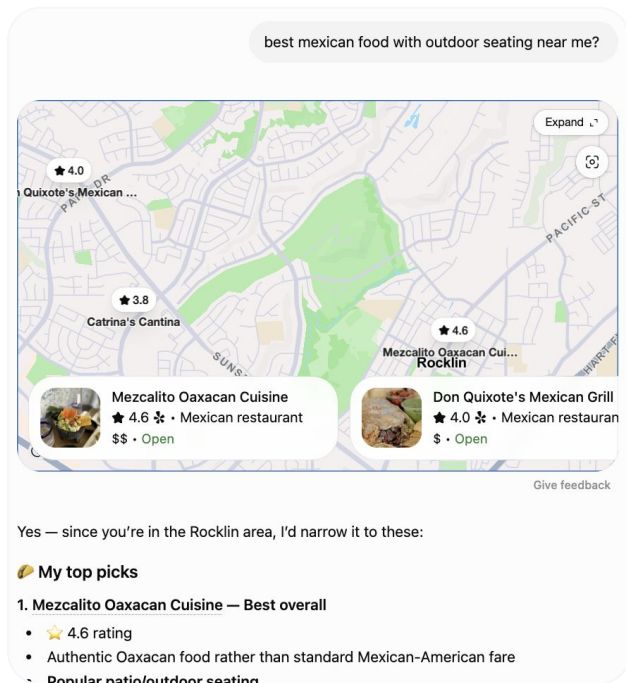

What's new for 2026

Isochrone API Playground

Parameters

access_token: from your account page
YOUR_MAPBOX_ACCESS_TOKEN

longitude: -81.478276 latitude: 28.44319

routing_profile:
☐ driving
☒ driving-traffic
☐ walking
☐ cycling

countout_type:
☒ minutes ☐ meters

contour: for each isochrone
15 min increments

Optional parameters

style: return the contours as GeoJSON polygons or linestrings
☒ polygons ☐ lines

default: rainbow color scheme

denoise: remove smaller contours
1

generalize: tolerance for Douglas-Peucker generalization in meters

Request URL

GET: https://api.mapbox.com/isochrone/v1/mapbox/driving-traffic/-81.478276%2C28.44319?contours_minutes=15&denoise=true&access_token=YOUR_MAPBOX_ACCESS_TOKEN

Response

```
{
  "features": [
    {
      "properties": {
        "fill-opacity": 0.33,
        "fillColor": "#bf4040",
        "opacity": 0.33,
        "fill": "#bf4040",
        "fillOpacity": 0.33,
        "color": "#bf4040",
        "contour": 60,
        "metric": "time"
      },
      "geometry": { ... }
    }
  ]
}
```

Directions API Playground

Steps

1. Drive north on Osceola Avenue.
2. Turn right onto East South Street.
3. Turn left onto South Orange Avenue/FL 527.
4. Turn right onto Lucerne Circle West.
5. Turn right to take the FL 408 Toll West ramp.
6. Keep right to take Florida's Turnpike toward Florida's Turnpike North/Exit.
7. Take exit 267A onto FL 429 Toll toward Apopka/Tampa/UF Research & Education Center/Winter Garden.

Optional parameters

engine: enable ev routing
☒ standard ☐ electric

alternatives: return alternative routes
☐

depart_at: local time at origin
2023-08-02T16:25

geometries: format of the returned geometry
☒ geojson ☐ polyline ☐ polylines

steps: enable turn-by-turn instructions
☒

Advanced guidance parameters

Vehicle size parameters
